Aim - a) Shell script for String tokenization.

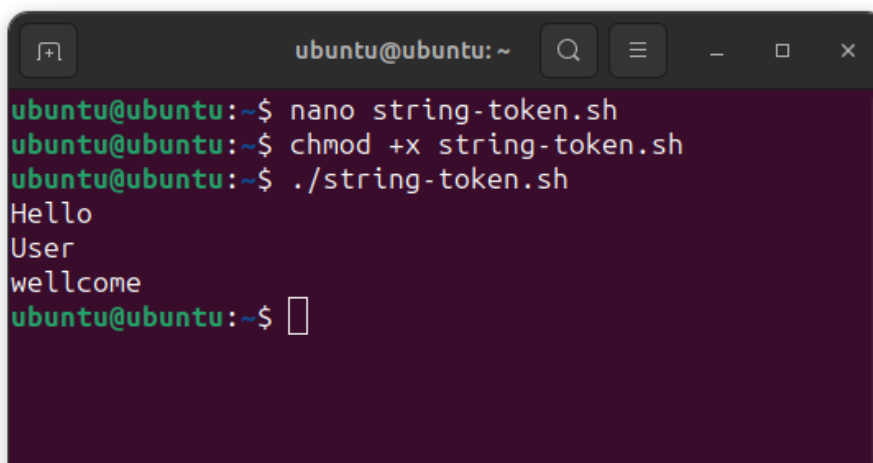

1. Shell script for String tokenization.

```
GNU nano 7.2 string-token.sh
#!/usr/bin/bash

string="Hello User wellcome"
for word in $string;
do echo "$word";
done
```

Terminal window showing the nano editor interface. The script content is as follows:

```
ubuntu@ubuntu:~$ nano string-token.sh
ubuntu@ubuntu:~$ chmod +x string-token.sh
ubuntu@ubuntu:~$ ./string-token.sh
Hello
User
wellcome
ubuntu@ubuntu:~$
```

Terminal window showing the execution of the shell script. The output is as follows:
